

## Backend Requirements

### Meeting at 6pm

1. Create a repository on github and name it **Backend-portfolio** and connect it to the folder in your machine
2. After that do **npm init -y**, press enter
3. Do **npm i express mongoose cors mongodb nodemon** then press enter, “make sure to give space in between each package”
4. On your keyboard, press **Ctrl + Shift + x** it is going to take you to the extension panel or simply click on the bricks which has a blue circle by it

Search for this extension and download it

Congratulations on reaching here without any issues....

5. Now go to this address and create a mongoDB account:  
<https://account.mongodb.com/account/register>
6. Create an account here too: <https://vercel.com/> where the frontend will be hosted
7. Make sure you have completed your frontend already... if you haven't then follow this link <https://www.youtube.com/watch?v=G-Cr00UYokU>
